

Week 1
12/22/2025

Week 1

Mon 22/12
Workout 1

ANKLE STRENGTHENING SESSION

1. Neural stretch 02697

10sec	Slow	
1 x	10	ES
Mon	B-Wgt	
22/12		

2. Jump rope 00893

10sec	Med	
1 x	2 min	
Mon	B-Wgt	
22/12		

3. A-march 01270

10sec	Slow	
1 x	10	
Mon	B-Wgt	
22/12		

MARCH INTO CALF RAISE

4. Lunge walk 01277

10sec	Slow	
1 x	10	ES
Mon	B-Wgt	
22/12		

LUNGE FORWARDS AND BACKWARDS

5. Calf raise walk 02087

10sec	Slow	
1 x	10	ES
Mon	B-Wgt	
22/12		

6. Single Leg Glute Bridge - March 10053

10sec	Slow	
1 x	10	ES
Mon	B-Wgt	
22/12		

INTO CALF RAISE

7. BB lateral lunge 03399

10sec	Slow	
1 x	10	ES
Mon	B-Wgt	
22/12		

Use a backpack

8. Hip flexor calf stretch 02761

10sec	Slow	
1 x	10	ES
Mon	B-Wgt	
22/12		

MAIN PART

9. KB Ankle Curls 10187

30sec	Slow	
3 x	8	ES
Mon		
22/12		

Use a resistance band

10. Band ankle eversion 06302

30sec	Slow	
3 x	6	ES
Mon		
22/12		

mini-band

11. Band ankle inversion 06304

30sec	Slow	
3 x	6	ES
Mon		
22/12		

12. Calf raise dorsiflexion 03951

30sec	Slow	
3 x	8	
kg	SS	
Mon		
22/12		

use a backpack

13. Band backward walk 00601

30sec	Slow	
3 x	6	ES
Load	Light	
Mon		
22/12		

mini-band resisted

14. One Arm Lateral Lunge 10223

30sec	Slow	
3 x	8	ES
kg	SS	
Mon		
22/12		

Use 5L water for lateral lunge

15. Seated calf raise 03656

30sec	Slow	
3 x	8	
kg	SS	
Mon		
22/12		

Use heavy weighted object (backpack filled)

16. Goblet Squat 10002

30sec	Slow	
3 x	6	
kg	SS	
Mon		
22/12		

Use 5L water bottle

17. Calf stretch 02599

30sec	Slow	
3 x	8	ES
Mon	B-Wgt	
22/12		

18. Bosu® knee lifts 01554

30sec	Med	
3 x	1	
sec	20	
Mon		
22/12		

Use a gentle / uneven surface (i.e pillow / foam padding)

19. Bosu® jumps 05343

30sec	Med	
3 x	1	
sec	30	
Mon		
22/12		

Use a gentle / uneven surface (i.e pillow / foam padding)

A-march 01270

MARCH INTO CALF RAISE

Tips: Start with an erect posture with the shoulders back. March forward & press up onto the ball of the foot & simultaneously flex the opposite hip. Dorsi flex the foot of the recovery leg then drive the foot into the ground. The ball of the foot should land on the ground first & directly beneath the hips. Swing the arms in time with the legs & keep the shoulders & hands relaxed. Repeat the movements while maintaining balance.

Cautions: Maintain a rigid torso & do not round the shoulders or flex the spine.

Band ankle eversion 06302

mini-band

Tips: In a seated position, attach the band or tubing around the ends of the feet. Keeping the knees stationary, evert one ankle to take the small toe up & away from the other foot. Control the movements back to the start position. The range of movement may vary depending on the flexibility of the ankle & foot.

Cautions: Ensure that the band or tubing is securely attached & strong enough to withstand the tension developed during this exercise.

Band ankle inversion 06304

Tips: In a seated position, attach the band or tubing to a fixed object & around the end of the foot. Keeping the knee stationary, invert the ankle to take the big toe away from the attachment. Control the movements back to the start position. The range of movement may vary depending on the flexibility of the ankle & foot.

Cautions: Ensure that the band or tubing is securely attached & strong enough to withstand the tension developed during this exercise.

Band backward walk 00601

mini-band resisted

Tips: Secure the band around the feet walk backwards while maintaining a stable upper body. Increase the length of the steps or decrease the contact time with the ground to modify the exercise.

Cautions: Ensure that the band is secure & that there is a clear space behind.

BB lateral lunge 03399

Use a backpack

Tips: Start with the barbell resting on the upper trapezius muscle & not the joints in the neck. Lunge to the side, keeping the torso erect & the shoulders above the hips. Contact the ground with a heel to toe stride & push firmly back to the start position. The lead knee should track in line with the centre of the foot. The hips & shoulders remain facing forward.

Cautions: Do not allow the front knee to travel past the toes unless specified otherwise by an exercise

Bosu® jumps 05343

Use a gentle / uneven surface (i.e pillow / foam padding)

Tips: Turn 90 degrees with each jump, gradually increasing the depth of the jumps after each repetition until a full squat jump is completed. Maintain correct jumping & landing mechanics & allow the ankles, & hips to flex to absorb the landing phase. Maintain a rigid torso & ensure that the knees track in line with the centre of the feet.

Cautions: The Bosu® should be placed on a level surface. Ensure that the Bosu® is firm & that there is no perspiration on the surface. Familiarize with basic movements on the Bosu® prior to commencing the dynamic exercises. Control each jump, particularly the full squat jumps & do not allow the knees to twist.

Bosu® knee lifts 01554

Use a gentle / uneven surface (i.e pillow / foam padding)

Tips: Jog on the Bosu by lifting the knees a small height while swinging the arms. Start by looking down then gradually raise the eye level to look forward as the exercise becomes more familiar. Keep the chest up & do not allow the shoulders to round.

Cautions: The Bosu should be on a flat surface & firmly inflated. Ensure that there is no perspiration or liquid on the Bosu. Do not allow the knee to buckle in. If you have a history of ankle or knee injury, seek professional advice prior to commencing this exercise.

Calf raise dorsi flexion 03951

use a backpack

Tips: Rest the barbell behind the neck on the upper trapezius muscle. Rock forward and onto the balls of the feet & backwards onto the heel. Repeat the movement while trying to keep the knees straight. Contract the thighs to assist in keeping the knees straight.

Cautions: Do not flex at the spine or round at the shoulders.

Calf raise walk 02087

Tips: Walk forwards in a very slow fashion with a natural heel to toe foot strike & press up onto the balls of the feet at the end of the stride. The feet should continue to face forward & maintain a natural stride length.

Cautions: If you have a history of ankle or foot injury, seek professional advice prior to commencing this

Calf stretch 02599

Tips: Start with the hands approximately shoulder width apart on the floor. The hips & shoulders should be square with the feet evenly apart. Push up onto the ball of the foot so the back leg is straight with the other leg flexed. Ensure that the hips & shoulders remain square & that the rear foot remains on the ground.

Cautions: Discontinue the stretch if pain or discomfort is experienced at the back of the thigh or the lower back. Relax the neck & shoulders while moving into position.

Goblet Squat 10002

Use 5L water bottle

Tips:

Cautions:

Hip flexor calf stretch 02761

Tips: Start with front foot facing forward & the rear foot on a slight angle. Maintain a rigid torso & lean forward by flexing the front knee & allow the heel of the back leg to come off the ground. Keep the hips & shoulders facing forward & do not allow the lower back to extend. Posteriorly tilt the pelvis to increase the emphasis on the hip flexor muscles.

Cautions: Do not force the stretch.

Jump rope 00893

Tips: Keep the shoulders above the hips & continue to look forward during the skips. Keep on the balls of the feet & not the heels. Increase the speed of the skips & decrease the contact time with the ground to progress the exercise.

Cautions: Gradually increase the speed of the

KB Ankle Curls 10187

Use a resistance band

Tips:

Cautions:

Lunge walk 01277

LUNGE FORWARDS AND BACKWARDS

Tips: Start with an erect posture with the hips & shoulders facing forward. Rapidly flex the hip & dorsiflex the foot to take a stride forward. The knees should track in line with the feet & the shoulders should remain above the hips. Keep the chest up & maintain a rigid torso. Vary the stride length & depth as required.

Cautions: Do not allow the knees to buckle inwards. Do not allow the knees to travel past the position of the feet unless specified otherwise by an exercise professional.

Neural stretch 02697

Tips: Place the feet on a wall with the hips close to the wall & keep the legs straight. Pull the feet back & forth continuously fashion while keeping the legs stationary. Position the hips further away from the wall if the legs cannot remain straight.

Cautions: Discontinue the stretch if pain or discomfort is experienced in the spine or buttocks.

One Arm Lateral Lunge 10223

Use 5L water for lateral lunge

Tips:

Cautions:

Seated calf raise 03656

Use heavy weighted object (backpack filled)

Tips: Start with the heels behind the knees so the ankles begin in a dorsiflexed position & press straight up onto the toes. Start with the feet wider apart to vary the exercise. Consider placing a pad on the thighs so that the bar does not press into the thigh.

Cautions: Do not twist the knees while pushing up onto the toes.

Single Leg Glute Bridge - March 10053

INTO CALF RAISE

Tips:

Cautions:
