Workout 1

Week 1

CALF STRENGTHENING

1. Dynamic calf stretch 02865

30sec	Slow	
1 x	10	ES
Mon		
22/12		

2. Calf raise walk 02087

30sec	Med	
3 x	10	
Mon		
22/12		

Heel to toe calf activations

3. Single Leg Fig.4 Balance 10143

30sec	Slow	
3 x	10	ES
Mon		
22/12		

Single leg calf activations

4. Seated calf raise 03656

30sec	Slow	
3 x	10	
Mon		
22/12		

Use a backpack / 5L bottle x 2

5. Heel raise exercise 10219

30sec	Slow	
3 x	30s	ES
Mon		
22/12		

Isometric : Stay on the balls of your feet

6. Calf raise 03931

30sec	Med	
3 x	10	ES
Mon		
22/12		

SPLIT STANCE INTO CALF RAISE

7. Calf raise dorsi flexion 03951

30sec	Slow	
3 x	10	ES
Mon		
22/12		

Onto toes and onto heels

8. Concentric split squat calf raise 06286

Start in a split stance with the back foot elevated and most of your weight on the front leg. Lower into a split squat under control. As you stand up, push through the ball of the front foot and rise into a calf raise. Lower the heel with control

30sec	Slow	
3 x	10	ES
Mon		
22/12		

9. Jumps 01306

Pogo jumps

30sec	Slow	
3 x	10	
Mon		
22/12		

10. Split jumps 01388

Change leg positioning in the air

30sec	Fast	
3 x	10	
Mon		
22/12		

Calf raise 03931

SPLIT STANCE INTO CALF RAISE

Tips: Start in a split stance with the knees aligned with the feet & the hips & shoulders square & facing forward. Keep the body in the same position & press up onto the balls of the front foot. Control the movement back to the start position. Press straight up onto the toes & do not invert or evert the foot.

Cautions: Do not round at the shoulders or flex the spine.

Calf raise dorsi flexion 03951

Onto toes and onto heels

Tips: Rest the barbell behind the neck on the upper trapezius muscle. Rock forward and onto the balls of the feet & backwards onto the heel. Repeat the movement while trying to keep the knees straight. Contract the thighs to assist in keeping the knees straight.

Cautions: Do not flex at the spine or round at the shoulders.

Calf raise walk 02087

Heel to toe calf activations

Tips: Walk forwards in a very slow fashion with a natural heel to toe foot strike & press up onto the balls of the feet at the end of the stride. The feet should continue to face forward & maintain a natural stride length.

Cautions: If you have a history of ankle or foot injury, seek professional advice prior to commencing this

Concentric split squat calf raise 06286

Start in a split stance with the back foot elevated and most of your weight on the front leg. Lower into a split squat under control. As you stand up, push through the ball of the front foot and rise into a calf raise. Lower the heel with control

Tips: Position the body under the barbell with one foot forward & the other foot on a box. Place the hands comfortably on the bar & hold the chest up, looking forward or slightly upward. Keeping the front foot flat on the floor, extend the knee & hip to straighten the lead leg & then press further onto the balls of the foot. The focus of this exercise is on commencing the ascending (concentric) phase of the split squat from a stationary position. Therefore, this exercise can be undertaken with the assistance from spotters who can assist in lowering the bar to the start position. Alternatively, a Smith machine can be used so at the completion of the split squat the bar can be racked.

Cautions: Maintain neutral curves in the spine throughout all phases of the split squat. Do not allow the shoulders to round or the torso to sway forward.

Dynamic calf stretch 02865

Tips: Stand with the shoulders at arms length from the wall with the feet hip width apart & facing forward. There should be a straight line from the head through the hips & to the ankles. Quickly flex & extend the knees in an alternating fashion while keeping the balls of the feet on the ground. The movements should occur at the hip & knee joints.

Cautions: A comfortable stretch should be experienced at the back of the lower leg in the calf

Heel raise exercise 10219

Isometric : Stay on the balls of your feet

Tips:

Cautions:

Jumps 01306

Pogo jumps

Tips: Keep the hands behind the head with the elbows wide & jump straight up & down. Minimize the contact time with the ground & land & push off the balls of the feet.

Cautions: Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground. The knees should track in line with the centre of the feet. Adequately warm up before commencing plyometric exercises. The landing surface should possess adequate shock absorbing qualities. Consider surfaces such as grass or a hard rubber mat.

Seated calf raise 03656

Use a backpack / 5L bottle x 2

Tips: Start with the heels behind the knees so the ankles begin in a dorsi flexed position & press straight up onto the toes. Start with the feet wider apart to vary the exercise. Consider placing a pad on the thighs so that the bar does not press into the thigh.

Cautions: Do not twist the knees while pushing up onto the toes.

Single Leg Fig.4 Balance 10143

Single leg calf activations

Tips:

Cautions:

Split jumps 01388

Change leg positioning in the air

Tips: Start with a split stance with the shoulders above the hips & the feet in line with the knees. The width of the stance may vary depending on the requirements of the exercise. Emphasize minimal contact time with the ground & swing the arms to assist the jumps & to maintain balance.

Cautions: Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground. Do not allow the knees to buckle inwards.
