

Week 1
6/6/2022

Week 1

Mon 06/06
Workout 1**KNEE REHABILITATION PROGRAM**

1. Treadmill run 00973

	Med	
1 x	5min	
Mon		
06/06		

2. Rowing 00345

	Med	
1 x	5min	
Mon		
06/06		

3. Cycling 01999

	Med	
1 x	5min	
Mon		
06/06		

4. Lunge Variations- Warm up 10116

LUNGE VARIATIONS (4 DIRECTIONS) - USING SMALL WEIGHTS

30sec	Slow	
3 x	6-8	ES
Mon		
06/06		

5. isometric split squat pin pull 10224

30sec	Iso	
3 x	30	
Mon		
06/06		

6. Single leg squat 05631

ISOMETRIC SQUAT HOLD

30sec	Iso	
3 x	30	ES
Mon		
06/06		

7. Reverse Lunge 10037

REVERSE LUNGE (FRONT FOOT ON BOSU BALL)

30sec	Slow	
3 x	6-8	
Mon		
06/06		

8. Step up 05988

WEIGHTED STEP UP

30sec	Med	
3 x	6-8	ES
Mon		
06/06		

9. Deadlift 03565

30sec	Slow	
3 x	6-8	
Mon		
06/06		

10. One Arm Lateral Lunge 10223

30sec	Slow	
3 x	6-8	ES
Mon		
06/06		

11. Broad jump 05322

30sec	Slow	
3 x	4-6	
Mon		
06/06		

12. Prone knee flexion 10220

30sec	Slow	
3 x	30	
Mon		
06/06		

USING EXERCISE BALL

13. Nordic Hamstring Curl 10013

30sec	Slow	
3 x	4-6	
Mon		
06/06		

14. Depth jumps 01342

30sec	Slow	
3 x	6-8	
Mon		
06/06		

DEPTH JUMP INTO HOLD

Broad jump 05322

Tips: Begin in the landing position with the shoulders over the knees & the knees over the ankles. Swing the arms forward & jump as far forward as possible. Land on the entire foot & allow the ankles, knees & hips to flex to absorb the landing.

Cautions: Ensure that the surface is non slip & that you have adequate footwear.

Cycling 01999

Tips: Place a block of wood or a firm book under the front wheel to keep the wheels the same height off the ground. Keep a firm & comfortable grip on the handlebar tops. Pedal in a circular motion, & not up & down. Pull back at the bottom of the pedal stroke & push over the top of the pedal stroke.

Cautions: Ensure that the bike is stable on the

Deadlift 03565

Tips: Begin with the bar close to the shins with the arms straight & the shoulders over the bar. Keep the chest up, look forward or slightly up with neutral curves in the spine. Extend the hips & knees, keeping the torso angle the same. Keep the arms straight & do not allow the hips to rise before or faster than the shoulders. As the bar passes above the knees, move the hips forward & continue pulling. Keep the bar close to the body & establish an erect position. Reverse the movements back to the start position.

Cautions: Do not allow the spine to flex. Do not allow the hips to rise before or faster than the

Depth jumps 01342

DEPTH JUMP INTO HOLD

Tips: The box height can vary depending on age, height, skill & strength level & the purpose of the exercise. Step forward off the box then jump straight up. The balls of the feet should contact the ground first & allow the ankles, knees & hips to flex during the landing phase from the jump. The shoulders should be positioned above the knees during the landing phase of the jump.

Cautions: The box should be sturdy & stable with a non-slip surface. Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground. The knee should track in line with the centre of the foot & adequately warm up before commencing this exercise.

isometric split squat pin pull 10224

Tips:

Cautions:

Lunge Variations- Warm up 10116

LUNGE VARIATIONS (4 DIRECTIONS) - USING SMALL WEIGHTS

Tips:

One Arm Lateral Lunge 10223

Tips:

Cautions:

Prone knee flexion 10220

USING EXERCISE BALL

Tips:

Cautions:

Reverse Lunge 10037

REVERSE LUNGE (FRONT FOOT ON BOSU BALL)

Tips:

Cautions:

Rowing 00345

Tips: Rowing techniques may vary depending on physical attributes of the rower. Such attributes include torso, arm & leg length & lower back, hip & ankle flexibility. The first sequence of movements should be the legs, back, shoulders then the arms. Reverse the movements to move the hands over the knees then pivot the body forward until the chest is close to the thighs & the shins are vertical. This exercise involves exaggerating the upright position of the torso.

Cautions: If you have a history of spinal injury or other shoulder pathologies, seek professional advice prior to commencing this exercise.

Single leg squat 05631

ISOMETRIC SQUAT HOLD

Tips: Start with the hands forward & the chest & chin up. Sit the hips back & squat to the ground, pushing firmly into the ground to extend back to the start position. As the hips lower towards the ground, reach the hands forward to maintain balance, keeping the foot flat on the ground. Maintain tension throughout the entire leg during all phases of the squat.

Cautions: Do not relax the leg muscles at any stage of the squat. Do not allow the knee to travel past the vertical position of the toes. If you have a history of knee injury or other knee pathologies, seek professional advice prior to commencing this exercise.

Step up 05988

WEIGHTED STEP UP

Tips: The height of the step may vary depending on the requirements of the exercise. However a general guideline in relation to the height of the box is that the knee should be in line with or slightly below the height of the hip. Place the foot on the box in a heel to toe stride & then extend the hip & knee while maintaining a tall posture. The foot should face forward & be in line with the knee & hip. The knee should track in line with the centre of the foot. Reverse the movements back to the start position while maintaining alignment. Either repeat the movements with the same leg or alternate legs with each repetition.

Cautions: Do not round the spine or allow the knee to buckle in. Start with a smaller box & increase the height of the box as strength improves as long as correct technique is not compromised.

Treadmill run 00973

Tips: Try to maintain the natural running gait, particularly as the speed of the treadmill increases. Keep the shoulders above the hips & continue to look forward.

Cautions: Ensure that the belt of the treadmill is clean from sweat, water or other slippery material. Be aware that the belt of some older treadmills may slip slightly, especially at faster speeds.
