

HAMSTRING RTP PROGRESSIONS

Rehabilitation Progression Overview
Our rehabilitation protocol follows a structured progression designed to ensure a pain-free and efficient return to play. The phases of progression include:

- Range of Motion,
- Balance and Proprioception,
- Isometrics,
- Concentrics,
- Eccentrics,
- Force Acceptance,
- Force Production,
- Plyometrics, and Sport-Specific Gym-Based Work.

This system is criteria-driven rather than exercise-completion-based, allowing athletes to move through phases as quickly as their recovery permits while maintaining a pain-free approach. Overlap between phases is expected, as progression is determined by the athlete's readiness and ability to meet criteria at each stage. Our goal is to optimize recovery while ensuring the athlete remains safe and functional throughout the process.

ROM

1. Hamstrings calf gluteal stretch 02597

2. Hamstrings calf stretch 01234

3. Hamstrings calf stretch 02829

4. Hamstrings gluteal stretch 01209

5. Hamstrings gluteal stretch 02600

6. Hamstrings gluteal groin stretch 02594

7. Hamstrings gluteal stretch 02613

8. Lying banded hamstring pull 10250

121.Depth jumps broad jump 01378

111.Skater Jumps 10229

113.Step up box jumps 01383

115.Single leg butt kicks 01390

117.Alternating single leg bound 05987

Up Hill Bounds

120.Depth jumps barrier jumps 01344

Alternating leg press jumps 06419

Tips: Start with the shoulders & hips supported with the foot positioned under the hip. Explosively extend the ankle, knee & hip to jump off the platform. Land with the other foot on the platform & repeat the movements with both legs in an alternating fashion. Positioning the feet higher or lower on the platform will alter the emphasis on the hip & leg muscles. Ensure that the knees track in line with the centre of the feet during both phases of the jumps.

Cautions: Ensure that the hips & shoulders remain in contact with the pads. Land & push off the balls of the feet & not the heel. Do not allow the knees to buckle inward.

Alternating single leg bound 05987

Tips: Bound on one leg at a time for two repetitions on each leg. Rapidly swing the arms & concentrate on distance with the bounds. Land & push off the ball of the foot, not the heel. Maintain rigidity throughout the torso & leg, minimizing the contact time with the ground.

Cautions: Do not allow the knee to buckle inwards during the bounds. Do not land on the ground with a straight leg. Adequately warm up before commencing the plyometric exercises.

Ankle Proprioception Clock 10325

Tips:

Cautions:

Backward hopping balance 01569

Tips: Hop backwards then stabilize upon landing. The knee should track in line with the centre of the foot. To modify the exercise, hold weighted implements such as dumbbells or a medicine ball.

Cautions: Do not land with straight legs & do not allow the torso to flex. Do not allow the knee to buckle inwards upon landing.

Band hip extension 02224

Tips: Secure the band or tubing around the lower leg & hold onto something for additional balance. Keep the leg straight & extend the hip as far as comfortable while keeping the shoulders above the hips. The amount of hip extension may be determined by the flexibility in the hip joint.

Cautions: Do not allow the lumbar spine to increase the neutral lordosis. Ensure that the band or tubing is securely attached.

Band single leg standing row 04609

Tips: Attach the band or tubing to a pole & keep the supporting leg slightly flexed for balance. Grasp the handle with a pronated grip with the hand in front of the chest. Keeping the upper body stationary, pull the elbows back in a rowing fashion then reverse the movements back to the start position. Varying the position that the elbows are pulled alters the emphasis on the shoulder & back muscles. Change the position of the hand to modify the exercise.

Cautions: Maintain an erect posture & do not flex the spine. Ensure that the band or tubing is securely attached.

Barbell Hip Thrust 10048

BB Hip thrust hold

SL Hip Thrust DL Eccentric

Tips:

Cautions:

BB single leg depth jumps stabilization 01338

Dowel reverse step down (V2)

Tips: Secure the barbell on the upper trapezius muscles & not on the joints in the neck joints. Step backwards off the box then jump straight up & stabilize on one leg. The ball of the foot should contact the ground first. Allow the ankle, knee & hip to flex during the landing phase from the jump & the shoulders should be positioned above the knee with the leg directly under the hip. The box height can vary depending on age, height, skill & strength level & the purpose of the exercise.

Cautions: The box should be sturdy & stable with a non-slip surface. Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground. The knee should track in line with the centre of the foot & adequately warm up before commencing this exercise.

BB single leg step down stabilization 01337

Dowel reverse step down (V1)

Tips: Secure the barbell on the upper trapezius muscles & not on the neck joints. Step backwards off the box & balance on the one leg during the landing. The ball of the foot should contact the ground first. Allow the ankle, knee & hip to flex during the landing & the shoulders should be positioned above the knee with the leg directly under the hip. The box height can vary depending on age, height, skill & strength level & the purpose of the exercise.

Cautions: The box should be sturdy & stable with a non-slip surface. Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground. The knee should track in line with the centre of the foot & adequately warm up before commencing this exercise.

Bilateral Hamstring Slider Curls 10059

End Range slider curl hamstring hold

Concentric slider curls

Eccentric slider curls

Tips:

Cautions:

Bosu® knee lifts single leg balance 01559

Tips: Step back with one leg then drive the hip up in a running motion. The supporting leg should remain slightly flexed with the knee tracking in line with the centre of the foot. Maintain a rigid torso with the hips & shoulders facing forward. To modify the exercise, vary the amount of knee flexion of the support leg.

Cautions: The Bosu should be on a flat surface & firmly inflated. Ensure that there is no perspiration or liquid on the Bosu. Do not allow the knee to buckle in. If you have a history of ankle or knee injury, seek professional advice prior to commencing this exercise.

Bosu® knee lifts single leg balance 01560

Tips: Press the leg back then flex hip up in a running motion. The supporting leg should remain slightly flexed with the knee tracking in line with the centre of the foot. Maintain a rigid torso with the hips & shoulders facing forward. To modify the exercise, vary the amount of knee flexion of the support leg.

Cautions: The Bosu should be on a flat surface & firmly inflated. Ensure that there is no perspiration or liquid on the Bosu. Do not allow the knee to buckle in. If you have a history of ankle or knee injury, seek professional advice prior to commencing this exercise.

Bosu® single leg balance 05351

Tips: Keeping the supporting leg slightly flexed, raise the other leg off & back onto the Bosu® in a controlled fashion. To modify the exercise, vary the position that the medicine ball is held while maintaining balance.

Cautions: The Bosu® should be placed on a level surface. Ensure that the Bosu® is firm & that there is no perspiration on the surface of the Bosu®.

Bosu® single leg balance 05352

Alternate position of MB (SL)

Tips: Keeping the supporting leg slightly flexed, raise the other leg off the Bosu®. Maintain balance & lower the medicine ball in front of the body in a controlled fashion, then return it to the start position. Keep the shoulders above the hips. To modify the exercise, vary the position that the medicine ball is lowered to.

Cautions: The Bosu® should be placed on a level surface. Ensure that the Bosu® is firm & that there is no perspiration on the surface of the Bosu®.

Bosu® single leg balance rotation 05376

Tips: Maintaining the same angle in the supporting leg, rotate the torso to take the medicine ball across the body in both directions. The starting angle of the hip & knee can vary depending on the requirements of the exercise. Maintain a vertical torso position & align the knee with the centre of the foot.

Cautions: The Bosu® should be placed on a level surface. Ensure that the Bosu® is firm & that there is no perspiration on the surface. Do not allow the knees to buckle inwards or twist.

Box single leg squat 05632

Squat from elevated box

Squat into elevated box

Tips: Start with the hands forward & the chest & chin up. Sit the hips back & squat to place the gluteals onto the box, pushing firmly into the ground to extend back to the start position. As the hips lower towards the ground, reach the hands forward to maintain balance while keeping the foot flat on the ground. Maintain tension throughout the entire leg during all phases of the squat. The height of the box can vary depending on the requirements of the exercise.

Cautions: Do not relax the leg muscles at any stage of the squat. Do not allow the knee to travel past the vertical position of the toes. If you have a history of knee injury or other knee pathologies, seek professional advice prior to commencing this exercise.

Box squat 03562

Concentric Back Squat (3 / 4 Squat)

Eccentric Back Squat (Increased TUT Eccentrically 3 / 4 squat)

Tips: Start with the bar behind the neck on the upper trapezius muscle & lift the elbows up slightly. Place the hands comfortably on the bar & look forward or slightly up. Sit back & down onto the box, when the gluteals contact the box pause for a moment then quickly extend the hips to stand up. Squat to a depth so the thighs are past a parallel position to the ground. The brief contact with the box is a cue to extend to the start position.

Cautions: Maintain neutral curves in the spine throughout the squat & do not allow the shoulders to round. Do not bounce off the box.

Cable straight leg deadlift 04462

Eccentric SL RDL

Tips: Start with the leg straight & look forward or slightly up. Keeping the arms & leg straight, flex at the hips to lower the cable towards the ground as far as comfortable & then extend to the start position. Keep the hips & shoulders square & do not allow the pelvis to rotate.

Cautions: This exercise requires good lower limb & back flexibility to complete with correct technique. Do not allow the spine to round during this exercise.

Cable straight leg hip flexion 04515

Hamstring curl hold - Back extension (machine)

Tips: Step forward, flex the hip then control the movements back to the start position. The distance of the step & the total range of movement may vary depending on flexibility of the hip.

Cautions: Ensure that the cable is securely attached to the lower leg.

Cable supine leg curl 00741

Leg curl supine

Tips: Secure the cable around the lower leg & keep the head, shoulders & pelvis in contact with the floor. Keep the thigh stationary & flex the knee as far as comfortable. Keep the rest of the body stationary as the knee is flexed. The position of the thigh may vary depending on the level of flexibility.

Cautions: Ensure that the cable is securely attached around the leg & control both phases of the exercise. If pain, discomfort or any other feeling is experienced in the spine, discontinue the exercise & seek professional advice.

Cross over stair walk 05509

Cross over step up onto box

Tips: Walk forward up the stairs by crossing one leg over the other. Maintain an erect posture with a slight forward lean at the hips.

Cautions: Ensure that the feet clear the steps & that the steps have adequate grip.

DB single leg squat 05122

Concentric SL Squat

Tips: Start with the foot completely on the box & facing forward. The height of the box can vary depending on the depth of the squat. Flex the hip & knee & lower the other leg down to the side of the box then extend to the start position. The knee should track in line with the centre of the foot & a neutral pelvic position maintained. Consider starting this exercise without weights or hold onto a stick to familiarize with the movements.

Cautions: Do not allow the shoulders to round or sway forward. Maintain neutral spinal curves throughout all phases of the squat.

DB step down lunge shoulder press 05151

Tips: The height of the box can vary depending on the requirements of the exercise. Step off the box & press the dumbbell above the head during the descent. Push firmly off the leg back to the start position. Keep the shoulders above the hips & maintain a rigid torso. The foot, knee & hip should be aligned. The front knee should not travel past the foot unless specified otherwise by an exercise professional. To modify the exercise, hold the dumbbell in the same hand as the front leg.

Cautions: Do not press the dumbbell forward of the shoulders. Do not allow either knee to twist or buckle during the step. Ensure that the box or step is placed on a stable, non-slip surface.

DB straight leg deadlift 06257

DB SL Hold

Tips: Begin with the dumbbells close to the shins with the arms straight. Keep the chest up, & look forward or slightly up with neutral curves in the spine & the legs straight. Extend the hips while keeping the arms straight & maintaining neutral spinal curves. Keep the dumbbells close to the body & establish an erect position with the feet flat on the ground. Reverse the movements back to the start position. The height of the box can vary depending on the requirements of the exercise.

Cautions: Do not allow the spine to flex.

DB Suitcase Marches 10329

KB Suitcase hold

Tips:

Cautions:

Deadlift 10032

Banded deadlift

Tips:

Cautions:

Depth jumps barrier jumps 01344

Tips: The height of the box & barrier can vary depending on age, height, skill & strength level & the purpose of the exercise. The landing surface should possess adequate shock absorbing qualities. Consider surfaces such as grass or a hard rubber mat. Step off the box then jump over the barrier. Use the arms to assist with the counter jump & land the jump on the other side hurdle. Look down at the ground & the hurdle during the exercise to ensure that the feet clear the hurdle. The contact time with the ground should be minimal & do not allow the knees to buckle inwards during any stage of the exercise. The shoulders should be positioned above the knees during the landing phase of the last jump.

Cautions: The box should be sturdy & stable with a non-slip surface & the hurdle should be collapsible in case the foot makes contact with it. Adequately warm up before commencing the plyometric exercises.

Depth jumps broad jump 01378

Tips: The box height can vary depending on age, height, skill & strength level & the purpose of the exercise. Step off the box then jump as far forward as possible while maintaining balance. The balls of the feet should contact the ground first & the shoulders should be positioned above the knees during the landing.

Cautions: The box should be sturdy & stable with a non-slip surface. Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground. The knee should track in line with the centre of the foot & adequately warm up before commencing this exercise.

Double-Leg Banded Hip Hinge 10249

Tips:

Cautions:

Eccentric leg curl 03151

DL Concentric SL Eccentric

Tips: Start with the hips & chest supported. The legs should be parallel, with the knee joints in line with the axis of the machine. Grasp the handles, keeping the torso stationary with the chest firmly against pad. Flex the knees as far as comfortable then take one leg away from the pad. Control the movement back to the start position with the other leg.

Cautions: Do not forcefully lock out the legs or allow the hips or thigh to lift off the bench when returning to the start position. Do not allow the lower back to arch, especially towards the end of knee flexion.

Figure 4 balance Stand 10030

Tips:

Cautions:

Glute bridge with ball squeeze 10254

Glute Bridge Hold

Tips:

Cautions:

Glute Bridge with Mini Band 10163

Tips:

Cautions:

Good morning 00118

Banded good morning, setup at back of neck

Dowel / BB Hold

Tips: Start with the bar resting behind the neck on the upper trapezius muscle. Lean forward at the hips with neutral curves in the spine until the torso is approximately parallel to the ground. While leaning forward ensure to control the descent & keep the chest & chin up. At the end of the descent extend to the starting position.

Cautions: Maintain the neutral curves in the spine through all phases of the exercises & do not round the shoulders. Keep the feet on the ground & control both phases of the lift. Look straight ahead or slightly up while leaning forward at the hips.

Half squat BB chest press 00694

Tips: Assume a parallel stance with the hips & shoulders facing forward & start with the bar close to the body. The body should be in a slight forward leaning position with the legs flexed for balance. Keep the upper body stationary & press the bar straight forward & on a slight upward angle. Do not arch the spine as the bar is pressed forward.

Cautions: Ensure that the other end of the bar is secure against the corner of the wall. Do not flex the spine or round the shoulders during this exercise.

Hamstring curls w/foam roller 10186

Standing cable hamstring curl

Tips:

Cautions:

Hamstring tantrum 10230

Tips:

Cautions:

Hamstrings calf gluteal stretch 02597

Tips: Lie comfortably with the spine on the floor with the feet together. Place the hands behind the leg & slide the hands up the leg to increase the stretch. Relax the shoulders & neck & keep the pelvis on the ground while sliding the hands. Try to keep the leg straight & dorsiflex the foot when a comfortable stretch is experienced at the back of the thigh.

Cautions: If pain or discomfort is experienced in the back, discontinue the stretch.

Hamstrings calf stretch 01234

Tips: Contract the buttock & thigh muscles while keeping the leg straight. Pull further to increase the stretch as the thigh muscles continue to contract. The duration of the stretch should be short & repeat the process.

Cautions: Keep the head & shoulders relaxed & in contact with the ground or bench. Do not allow the hip or knee to rotate for the purpose of this stretch.

Hamstrings calf stretch 02829

Tips: Face the wall with the hips & shoulders square & the knee slightly flexed. Keep the rest of the body stationary & slowly straighten the knee. Lean the hips away from the wall to increase the stretch. Do not allow the hips or shoulders to rotate as the knee straightens.

Cautions: Straighten the knee slowly & do not forcefully lock the leg.

Hamstrings gluteal groin stretch 02594

Tips: The foot of the flexed leg should remain close to the thigh to ensure that the knee does not twist. Initiate the movement forward from the hips & gradually flex the rest of the spine. Slide the hands forward along the floor. Ensure that flexion occurs evenly throughout the spine.

Cautions: Lower the body slowly & do not force the stretch. Discontinue the stretch if pain is experienced at any stage. Do not allow the foot of the flexed leg to be positioned away from the thigh of the same leg.

Hamstrings gluteal stretch 01209

Tips: Secure the strap around the foot & maintain a firm grip on the ends of the strap. Keep the leg straight & actively flex the hip as far as possible. At the end of active the hip flexion pull on the strap to further increase the stretch while maintaining the contraction. For the purpose of this exercise the leg should raise straight up. Hold the assisted stretch for a short period of time then release the stretch & repeat the movements. A towel or belt may be used as an alternative to the stretching strap.

Cautions: Ensure that the strap is secure & do not force the stretch.

Hamstrings gluteal stretch 02600

Tips: Take a small step forward & place the heel on the ground. Lean forward to flex at the hips & reach the hands towards the ground. Begin the movement at the hips & not the neck. Flex the upper spine & tuck the head towards the shin towards the end of hip flexion. Ensure that the hips & shoulders remain square & that the pelvis does not rotate.

Cautions: Discontinue the stretch if pain or discomfort is experienced in the spine.

Hamstrings gluteal stretch 02613

Tips: Start in a full squat position with the hands on the ground next to the feet & the neck in line with the spine. Flex the neck towards the knees when the legs are straight. Consider placing the hands on blocks if you can't reach the floor towards the end of the stretch.

Cautions: Continue to breathe comfortable while in the flexed position. Discontinue the stretch if pain or discomfort is experienced in the spine.

Hip Thrust 10017

Banded hip thrust
Machine hip thrust

Tips:

Cautions:

Hopping balance 01528

Tips: Hop forward in the sagittal plane, sideways in the frontal plane then back in the transverse plane. Stabilize after each hop. Ensure that the knee tracks in line with the centre of the foot. To vary the exercise, have someone call out the direction to hop to. The distance & height of the hops may vary depending on the requirements of the exercise.

Cautions: Ensure that the ground has adequate grip. If you have a history of ankle or knee injury, seek professional advice prior to commencing this exercise.

Inch Worm 10014

Tips:

Cautions:

Incremental jumps 01354

Tips: The height of the boxes can vary & depend on age, height, skill & strength level & the purpose of the exercise. The landing surface should possess adequate shock absorbing qualities. Consider surfaces such as grass or a hard rubber mat. Look down at the ground & at the boxes between each jump. Use the arms to help assist with the jumps & ensure that the feet land completely onto each box. Emphasis height with the jumps rather than distance & keep the body weight forward to assist with balance. The contact time with the ground should be minimal.

Cautions: The boxes should be sturdy & stable with a non-slip surface. Adequately warm up before commencing the plyometric exercises.

ISO Hamstring Curl 10260

Tips:

Cautions:

Isometric mid-thigh pull 10395

Unweighted

Tips:

Cautions:

isometric split squat pin pull 10224

Unweighted

Tips:

Cautions:

KB Swings 10386

Tips:

Cautions:

Lateral bound balance 01430

Tips: Push firmly off the ball of the foot, jump straight up upon contacting the ground with the other foot & then balance in a semi squat position. Keep the shoulders inside the vertical position of the knees during the push off. Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground.

Cautions: If you have a history of ankle or knee injury, seek professional advice prior to commencing this exercise. Adequately warm up before commencing explosive exercises. The landing surface should possess adequate shock absorbing qualities. Consider surfaces such as a spring loaded floors or a hard rubber mat.

Leg curl 00862

Iso hold

Tips: Sit with the hips supported against the pads. The pads should rest against the anterior upper shin & the posterior lower leg with the axis of the machine in line with the knee joint. Keep the rest of the body stationary & flex the knees then reverse the movements back to the start position. Control both phases of the exercise & do not forcefully lock the knees.

Cautions: If you have a history or knee injuries or other knee pathologies, seek professional advice prior to commencing this exercise.

Leg curl 03149

Prone leg curl hold (banded)

DB Hold

Tips: Start with the hips & chest supported. The legs should be parallel & the knee joints in line with the axis of the machine. Grasp the handles, keeping the torso stationary with the chest firmly against pad. Flex the knees as far as comfortable then control the movement back to the start position.

Cautions: Do not forcefully lock out the legs or allow the hips or thighs to lift off the bench when returning to the start position. Do not allow the lower back to arch, especially towards the end of knee flexion.

Leg press 00923

Iso hold

Tips: Start with the shoulders & hips supported with the feet approximately hip width apart & parallel. The feet should remain flat against the platform & placing the feet higher or lower on the platform will alter the emphasis on the hip & leg muscles. Allow the hips & knees to flex as far as comfortable then extend to the start position. Control both phases of the exercises & ensure that the knees track in line with the centre of the feet.

Cautions: Ensure that the hips & shoulders remain in contact with the pads & do not lock the knees at full extension. Do not allow the spine to lose the neutral curves, particularly at full hip flexion. Replace the supports at the completion of each set.

Lunge 02128

Isometric lunge hold

Tips: Place the hands on the hips & take an exaggerated step forward. Keep the torso erect with the shoulders above the hips. Contact the ground with a heel to toe stride while keeping the lead knee directly over the foot then push firmly back to the start position. The thigh of the trail leg should be almost perpendicular to the ground with the knee under the hip. The knees should track in line with the centre of the feet while the hips & shoulders remain square.

Cautions: Do not allow the front knee to travel past the position of the foot unless specified otherwise by an exercise professional.

Nordic Razor Curl 10238

Eccentric Razor Curl

Tips:
Cautions:

Overhead step up step down 06190

Tips: The height of the step may vary depending on the requirements of the exercise. However a general guideline in relation to the height of the box is that the knee should be in line with, or slightly below the height of the hip. Start with the barbell above the head with the arms locked out. Maintain a straight body position throughout the exercise with the barbell directly above the position of the shoulders. Place the foot on the box in a heel to toe fashion, & then extend the hip & knee to step over the box. Push firmly off the lead leg to return to the start position. The foot should face forward & be in line with the knee & hip. The knee should track in line with the centre of the foot.

Cautions: Do not round the spine or allow the knee to buckle in. Start with a smaller box & increase the height of the box as strength improves as long as correct technique is not compromised. Do not allow the barbell to sway forward from the shoulders.

Rapid single leg leg extension 00858

Pulses (SL Quad)

Tips: Sit with the hips supported against the pads. The pads should rest against the lower leg & the axis of the machine should line up with the joint line of the knee. Start with the leg slightly flexed then flex & extend the knee with small movements. The knee should not fully straighten at during the extension phase of this exercise.

Cautions: If you have a history or knee injuries or other knee pathologies, seek professional advice prior to commencing this exercise.

Reverse Lunge 10037

Reverse lunge off foam pad
KB Reverse Lunge, (Reset Following Reverse)

Tips:
Cautions:

Roman chair back extension 04294

45 degree roman chair (Holding weight - isometric hold at 45degrees)

Tips: Start with the legs straight & the hips over the bench with a weight at the chest. A dumbbell or medicine ball can be used as an alternative form of resistance. Extend the lumbar & thoracic spine first then extend the torso until the shoulders are in line with or slightly above the hips. Reverse the movements back to the start position.

Cautions: If you have a history of spine injury or high blood pressure, seek medical advice prior to commencing this exercise. Discontinue the exercise if pain or discomfort is experienced in the spine.

SB bridging leg curl 04180

DL Concentric Leg Curl

DL Eccentric Leg Curl

Tips: Position the feet securely on the stability ball with the hands on the floor. Lift the hips off the floor until the legs are in line with the torso then flex the legs to bring the ball towards the hips & return back to the start position. Return to the floor after each repetition or keep the body off the floor. Vary the position of the hands on the floor to assist with balance & place the hands across the chest to progress the exercise.

Cautions: Do not raise the body too high off the floor. If you have a history of neck or upper thoracic injury, seek professional advice prior to commencing this exercise.

SB bridging leg extension 00474

Tips: Start with the head & shoulders on the stability ball with the knees in line with the hips & the feet under the knees. Maintain the bridging position & take one foot off the ground & extend the knee then reverse the movements back to the start position. Repeat the movements with the same leg or alternate the legs continuously. Place the hands across the chest or above the head while maintaining the same body position to vary the exercise.

Cautions: Maintain a neutral & level pelvic position & do not allow the lower back to excessively extend.

SB leg extension 04170

Tips: A general guideline in relation to the height of the stability ball is that the knees should be in line with or slightly below the height of the hips. Maintain a tall seated position & flex the hip to lift the foot off the ground then extend the knee. Reverse the movement back to the start position. Repeat the movements with the same leg or alternate with the both legs.

Cautions: Maintain neutral curves in the spine.

SB single leg squat 00627

Tips: Start with the stability ball against the mid spine with the foot in line with the knee & hip. Flex the hip & knee until the thigh is approximately parallel to the ground then extend back to the start position. Keep the chest up & continue to look forward to maintain a tall posture & try to maintain neutral curves in the spine.

Cautions: Do not round the spine or allow the knee to buckle in. Ensure that the stability ball is secure against the wall.

Seated good morning 10257

Seated cable good morning

Tips:

Cautions:

Single leg bridging 06221

Concentric SL Elevated Glute bridge

Tips: Start with the heel in contact with the box & keep the other leg straight. The height of the box can vary depending on the requirements of the exercise. Lift the hips off the floor until the thighs are in line with the torso, then control the movement back to the start position. Either hold the position for the prescribed duration or repeat the exercise continuously.

Cautions: Do not allow the spine to extend past the neutral position unless specified otherwise by an exercise professional. Try to avoid the pelvis from tilting as the hips are raised off the ground.

Single leg butt kicks 01390

Tips: Start with an erect posture with the shoulders back. Keep the chin parallel to the ground & the chest out. Flick the feet straight up to contact the buttocks & continue to move forward. Swing the arms to assist in developing fast foot speed & to maintain balance. Maintain a rigid torso with a slightly forward lean at the hips.

Cautions: Do not round the shoulders or flex the spine. Warm up adequately before commencing this exercise at a higher intensity.

Single leg DB front raise 03566

Tips: Start with the supporting leg slightly flexed & the other leg extended for balance. The amount of knee flexion & forward lean can vary depending on the requirements of the exercise. The hips & shoulders should remain square & maintain a neutral curve in the spine. Do not allow the pelvis to laterally flex or rotate. Flex the shoulders while keeping the arms straight, & then return them to the start position. Try to keep the rest of the body stable as the arms move, focusing the eyes on the same spot to assist with balance.

Cautions: Do not flex the spine or extend the neck. If you have tight shoulders or a stiff thoracic spine, the total range of movement may be restricted.

Single leg depth jumps 01355

Tips: The height of the boxes can vary & depend on age, height, skill & strength level & the purpose of the exercise. The landing surface should possess adequate shock absorbing qualities. Consider surfaces such as grass or a hard rubber mat. Step off the box then hop off the ground onto the next box while keeping the foot facing forward. The knee should track in line with the foot. Emphasize height with the hops rather than distance & the contact time with the ground should be minimal.

Cautions: The boxes should be sturdy & stable with a non-slip surface. Adequately warm up before commencing the plyometric exercises. If you have a history of knee or ankle injury, seek professional advice prior to commencing this exercise.

Single leg depth jumps 01356

Tips: The height of the boxes can vary & depend on age, height, skill & strength level & the purpose of the exercise. The landing surface should possess adequate shock absorbing qualities & consider surfaces such as grass or a hard rubber mat. Step off the box then hop off the ground onto the next box while keeping the foot facing forward then repeat the exercise back to the original box. The knee should track in line with the foot & do not allow the knee to buckle inwards. Emphasize height with the hops rather than distance & the contact time with the ground should be minimal.

Cautions: The boxes should be sturdy & stable with a non-slip surface. Adequately warm up before commencing the plyometric exercises. If you have a history of knee or ankle injury, seek professional advice prior to commencing this exercise.

Single Leg Fig.4 Balance 10143

Marching balance

Tips:

Cautions:

Single Leg Glute Bridge - March 10053

SL Glute Bridge Hold

Tips:

Cautions:

Single leg jumps 01281

Tips: Start with the hips & shoulders square & facing forward. Ensure that the box is stable & the appropriate height. A chair or bench may be used as an alternative. Jump straight up & use the arms to assist with the jump & to maintain balance. To increase the resistance, hold dumbbells or place a barbell behind the neck on the shoulders. The knee should track in line with the centre of the foot & repeat the jumps.

Cautions: Do not allow the torso to flex or the knee to buckle inwards. Do not allow the heels to contact the ground before the balls of the foot.

Single leg jumps 02152

Tips: Jump up & down as high as possible on one leg for the prescribed time or repetitions. Continue to swing the arms with each jump. Allow the ankle, knee & hip to flex to absorb the landing then rapidly extend for each jump. The shoulders should be positioned above the hips & knee during the landing. Land on the ball of the foot, not the heels. Consider completing this exercise in front of a mirror to ensure that the alignment of the ankle, knee & hip are correct.

Cautions: Do not allow the knee to buckle inward. This exercise requires adequate strength in addition to balance to perform correctly & safely.

Single leg jumps balance 01565

Tips: Hop straight up & turn 180 degrees in the air. Land on the ball of the foot first & gain balance by allowing the hip & knee flex. The knee should track in line with the centre of the foot.

Cautions: Do not land with straight legs or allow the torso to flex upon landing. Do not allow the knee to buckle in.

Single leg jumps stabilization 01264

Tips: Start with the unsupported leg in a position ready to land on the other side of the cone & begin the jump with a counter movement. Land on the ball of the foot & absorb the landing through the ankle, knee & hip. Maintain a rigid torso with the shoulders above the hips. The height & distance of the jumps can vary & the knee should track in line with the foot. The landing surface should possess adequate shock absorbing qualities & consider surfaces such as grass or a hard rubber mat.

Cautions: Adequately warm up prior to commencing jumping exercises. Maintain a slight forward lean at the hips & do not allow the spine to extend during the jumps.

Single leg leg press 01977

Iso Hold SL

Tips: Sit with the hips & spine supported & place the foot on the platform. Press the platform forward until the leg is almost straight then reverse the movement back to the start position. The knee should track in line with the centre of the foot.

Cautions: Do not allow the pelvis to posteriorly tilt, particularly as the hip & knee flexes. Do not lock out the leg at the completion of the extension.

Single Leg RDL 10001

SL RDL (banded at knee)
RDL Hold
DB / BB Hold
SL RDL Barbell (Raised)

Tips:
Cautions:

Single leg rotation 06160

Tips:Start with the foot facing forward & the knee slightly flexed. Tuck the elbows into the sides & rotate the torso slowly in both directions, keeping the hips facing forwards. A dumbbell or a weights plate can be used as an alternate form of resistance.
Cautions: Do not allow the spine to flex during the rotations.

Single leg step down stabilization 01370

Step down
Tips: The box height can vary depending on age, height, skill & strength level & the purpose of the exercise. Step sideways off the box & balance on the one leg during the landing. Land on the ball of the foot & not the heel. Allow the ankle, knee & hip to flex during the landing & the shoulders should be positioned above the knee with the leg directly under the hip.
Cautions: The box should be sturdy & stable with a non-slip surface. Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground. The knee should track in line with the centre of the foot & adequately warm up before commencing this exercise.

Skater Jumps 10229

Tips:
Cautions:

SL Deadlift Jump 10381

Deadlift jump into knee drive
Tips:
Cautions:

Split squat 04255

DB / KB Split squat hold (Bottom)
Split Squat KB, Concentric only
Split Squat KB, Eccentric only
Tips:Assume a split stance with the hips & shoulders square & facing forward. Keep the knees in line with the respective feet & hips. Place the hands forward for balance & lower the hips straight towards the ground then extend up to the start position. The shoulders should remain above the hips & neutral spinal curves maintained.
Cautions: Do not allow the front knee to travel past the foot unless specified otherwise by an exercise

Squat jumps 00253

Tips: Rest the bar behind the neck with the hands supporting the bar & ensure that the bar is stable on the shoulders. The feet should be shoulder width apart or slightly wider & the torso needs to remain rigid with neutral curves in the spine. Perform a full squat then jump up making sure that the bar travels straight up & down. Absorb the jump & smoothly lower the body to a full squat & repeat the movements.

Cautions: Keep the torso rigid & do not allow the shoulders to shift forward at all.

Step down deceleration 01352

Tips: The box height can vary depending on age, height, skill & strength level & the purpose of the exercise. Step forward off the box & allow the ankle, knee & hip to flex during the landing. The shoulders should be positioned above the knee with the leg directly under the hip.

Cautions: The box should be sturdy & stable with a non-slip surface. Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground. Do not allow the knees to buckle inwards upon landing on the ground. Adequately warm up before commencing this exercise.

Step up 06192

Tips: The height of the step may vary depending on the requirements of the exercise. However a general guideline in relation to the height of the box is that the knee should be in line with, or slightly below the height of the hip. Start with the barbell on the upper trapezium muscle & not the joints in the neck. Place the foot on the box in a heel to toe fashion, then extend the hip & knee while maintaining a tall posture. Stand on the box & then return to the start position, leading with the same leg. The foot should face forward & be in line with the knee & hip. The knee should track in line with the centre of the foot.

Cautions: Do not round the spine or allow the knee to buckle in. Start with a smaller box & increase the height of the box as strength improves as long as correct technique is not compromised.

Step up band hip flexion 05626

Cable banded hip flexion

Tips: A general guideline in relation to the height of the box is that the knee should be in line with or slightly below the position of the hip. However the box height may vary depending on the requirements of the exercise. Secure the band or tubing around a belt or something similar. Extend the hip & knee, simultaneously flexing the trail leg & dorsi flex the foot in a running fashion. Swing the arms in a running fashion also to assist in maintaining balance then control the movements back to the start position.

Cautions: Ensure that the band or tuning is securely attached & strong enough to resist the tension developed during this exercise.

Step up box jumps 01383

Tips: Select a box high for the purpose of this exercise & press firmly off the box & swing the arms quickly to develop height with the jumps. The knee should track in line with the foot & maintain a rigid torso with the shoulders above the hips.

Cautions: The box should be sturdy & stable with a non-slip surface. Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground.

Straight leg deadlift 03537

Deadlift (Straight bar - Drop weight from top)

Tips: Start the bar slightly below knee level with the legs straight. The shoulders should be over the bar with the arms straight. As the bar passes above the knees, move the hips forward & continue pulling. Keep the bar close to the body & establish an upright position. Reverse the movements back to the start position.

Cautions: Continue to look forward or slightly. Do not allow the shoulders to round.

Straight leg deadlift 03563

BB hold

Tips: Begin with the bar at thigh level with the arms straight. Start with the chest up & shoulder blades back. Flex at the hips, maintaining neutral curves in the spine, until the bar travels below the knees. Keep the shoulders positioned over the bar as the bar travels down & the feet should remain flat on the floor. Extend the hips & reverse the movement back to the start position.

Cautions: Do not allow the spine to flex.

Straight leg running 01284

Tips: Start with an erect posture with the shoulders back. Keep the chin parallel to the ground & the chest out. Run forward while keeping the legs straight & press off the balls of the feet. Try to minimize the contact time with the ground for each stride. For the purpose of this exercise, do not allow the heels to contact the ground.

Cautions: Do not round the shoulders or flex the spine. Warm up adequately before commencing this exercise at a higher intensity.

Triple jump bounding 05952

Tips: The landing surface should possess adequate shock absorbing qualities. Consider surfaces such as a sprung floor or a hard rubber mat. Rapidly swing the arms & concentrate on distance with the bounds. Land & push off the balls of the foot, not the heel. Maintain rigidity throughout the torso & leg, minimizing the contact time with the ground. Allow the hips & knees to flex during the final landing, keeping the shoulders above the knees.

Cautions: Do not allow the knees to buckle inwards during the bounds. Do not land on the ground with a straight leg. Adequately warm up before commencing the plyometric exercises.

Up hill single leg bound 02089

Up Hill Bounds

Tips: The steepness of the hill may vary depending on the requirements of the exercise. Continue to swing the arms & hop up the hill while minimizing the contact time with the ground. Land & push off the ball of the foot & not the heel.

Cautions: Ensure that the surface is flat. Warm up adequately prior to commencing the plyometric exercises. If you have a history of ankle or lower leg injury, seek professional advice prior to commencing this exercise.

Walkover wood chop step down 05187

Tips: Begin with a smaller size box & increase the height depending on the requirements of the exercise. Step onto the box then over to the other side & take the medicine ball above the head to the other hip. Push firmly off the lead leg & repeat the movements in both directions. A weights plate or dumbbell can be used as an alternative form of resistance.

Cautions: Ensure that the feet land flat on the ground & do not twist the knee.
