

AMATUKS DECEMBER HOME PROGRAM

Holiday Program Session Requirements

Each session is designed to be completed independently and requires minimal equipment. Everyone is expected to arrive at every session prepared and ready to train. You are expected to have the following with you:

- A smartphone / smartwatch
- Comfortable running shoes
- Access to basic household equipment (chair/bench, floor space, water bottles where required)
- Adequate hydration

STRAVA

Running Load

All running sessions must be tracked using the Free Strava application. Please download the app and ensure that you enable your location services (GPS) before starting your run. Strava will be used to track total running distance and monitor consistency across the program. If you have a smartwatch, you can also link it to Strava so that your running data can be stored and tracked over time.

If you do not have a smartwatch, simply carry your phone with you while running, the app will calculate distance and route using GPS. Accuracy matters. Try and start and stop your activity correctly and avoid pausing mid run unless necessary.

Week 2

AEROBIC CAPACITY + CORE

1. Run 02106

1 x	1	
km	10	
Mon		
29/12		

Monday: 10 km run + Core

2. Long lever plank 10489

	Iso	
3 x	60sec	
Mon		
29/12		

Progression : Start in a plank position with your hands in front of your shoulders to lengthen the lever. Keep your body in a

3. Back extension 04803

	Iso	
3 x	12	
Mon		
29/12		

Progression : Back extension isometric hold - when lifting chest off the ground, hold position for 3 seconds before dropping.

4. Single Leg Glute Bridge - March 10053

	Med	
3 x	15	ES
Mon		
29/12		

Progression: Start in a glute bridge - keep hips elevated, lift one leg at a time, keep alternating.

5. Alternate Jack knife 10334

	Slow	
3 x	15	ES
Mon		
29/12		

Progression: Same exercise done slower and more controlled.

6. Figure 4 balance Stand 10030

	Slow	
3 x	10	ES
Mon		
29/12		

Progression : Balance on one leg, non-balancing leg moves multidirectional (forward, side to side, backward)

Tue 30/12
Workout 1

AEROBIC CAPACITY + CORE

1. Run 02106

1 x	1	
km	10	
Tue		
30/12		

Tuesday: 10 km run + Core

2. Long lever side plank 10490

	Iso	
3 x	15	ES
Tue		
30/12		

Progression: Side plank from your hand instead of elbow

3. Leg raise reverse sit up 06172

	Slow	
3 x	15	
Tue		
30/12		

Progression : Full range - straight leg reverse sit up

4. Kneeling arm-leg raise 04974

	Slow	
3 x	15	ES
Tue		
30/12		

Progression: weight (backpack) placed on back.

5. Back extension arm-leg raise 01147

	Slow	
3 x	12	
Tue		
30/12		

Progression: Back extension - Sequencing arms, then legs

6. Side plank with suspended top-leg hip flexion 10491

Progression : side plank - hold knee in flexed position

	Iso	
3 x	15	
Tue		
30/12		

Wed 31/12
Workout 1

AEROBIC MAINTENANCE + PREHAB

1. Run 02106

1 x	1	
km	6	
Wed		
31/12		

Wednesday: 6 km run + Prehab

2. Hamstring walkout exercise 10252

	Slow	
3 x	15	ES
Wed		
31/12		

Progression : Hamstring walkout with pause at extension / bottom.

3. Forward lunge backward lunge 05188

	Fast	
3 x	20	ES
Wed		
31/12		

Progression: Continuous forward and backward lunge - no break between

4. lateral lunges 10447

3 x	12	ES
Wed		
31/12		

Progression: Lateral lunge (weighted) holding 5L bottle - continous.

5. Box Calf Raises 10029

	Slow	
3 x	15	
Wed		
31/12		

Progression: Calf raise from an elevation (i.e step) fast up - slow down.

6. Single Leg RDL 10001

	Med	
3 x	8	ES
Wed		
31/12		

Progression: Single leg RDL into high knee drive, then balance for 3 seconds.

7. Calf stretch 02691

	Slow	
3 x	15	ES
Wed		
31/12		

Progression: split stance calf raise - bend the back knee and go into a calf raise from the front leg.

8. Copenhagen Adductors 10193

	Slow	
3 x	8	ES
Wed		
31/12		

Progression: static hold but shift hips up and down

9. Step up 05988

	Med	
3 x	10	ES
Wed		
31/12		

Progression: Fast up - slow down

10. Push Up - Uneven 10340

	Fast	
3 x	15	ES
Wed		
31/12		

Progression : continuous push up with constant hand transitions.

11. Deep squat 01211

	Slow	
3 x	15	
Wed		
31/12		

Progression : Bodyweight squat with 5kg water bottle / backpack, pause at bottom of squat.

Thu 01/01
Workout 1

Fri 02/01
Workout 1

OFF / RECOVERY

AEROBIC FLUSH + GENERAL STRENGTH

1. Run 02106

1 x	1	
km	4	
Fri		
02/01		

Friday: 4 km run + General Strength

2. Push up 04773

Progression: Decline push up (legs elevated)

	Fast	
3 x	20	
Fri		
02/01		

3. Bench dips 03676

	Slow	
3 x	20	
Fri		
02/01		

Progression: Slow and controlled movements.

4. Ankle taps 10217

	Slow	
3 x	20	ES
Fri		
02/01		

Progression: ankle tap while one leg is elevated

5. Bent Knee Calf Raise 10184

	Slow	
3 x	12	ES
Fri		
02/01		

Progression: Single leg bent knee calf raise

6. Back flexion gluteal stretch 02750

	Slow	
3 x	10	
Fri		
02/01		

Progression: Active back flexion exercise from lying position.

7. Bear Walk 10006

	Med	
3 x	10	
Fri		
02/01		

Progression : Bear crawl in different directions (forward backward - side to side)

8. Jumping Lunges 10307

	Fast	
3 x	15	ES
Fri		
02/01		

9. Climbers 10278

	Slow	
3 x	15	ES
Fri		
02/01		

Progression: Slow climbers - focusing more on trunk control

10. DB prone row 04659

	Med	
3 x	10	ES
Fri		
02/01		

Progression: Prone row, holding 2L bottle

11. Lateral Raise Hold 10428

Progression: Holding 2 x 2L water bottle.

	Iso	
3 x	10	
Fri		
02/01		

Sat 03/01
Workout 1

AEROBIC CAPACITY + CORE

1. Run 02106

1 x	1	
km	10	
Sat		
03/01		

Saturday: 10 km run + Core

2. Prone arm-leg raise 04799

Progression: Same arm - same leg raise

	Slow	
3 x	12	ES
Sat		
03/01		

3. Straight leg deadbug 10343

Progression: Straight arm and straight leg deadbug

	Slow	
3 x	20	ES
Sat		
03/01		

4. Single Leg Glute Bridge - March 10053

Progression: Single leg glute bridge hold at the top

	Iso	
3 x	12	
Sat		
03/01		

5. Hollow Hold 10281

Progression: static hollow hold.

	Iso	
3 x	60sec	
Sat		
03/01		

6. Sit up 04920

Progression: Sit up with midway pause.

	Slow	
3 x	20	
Sat		
03/01		

Sun 04/01
Workout 1

OFF / RECOVERY

Plank 02071

Tips: Start with the forearms flat on the floor with the palms facing down. Extend the hips & knees to press up to a front support position while keeping the torso rigid then reverse the movements back to the start position. Control both phases of the exercise, particularly the lowering phase. Consider placing a mat under the arms for additional comfort.

Cautions: Keep the neck in line with the spine & do not allow the spine to sag.

Side plank 04422

Tips: Start with the forearm flat on the ground & the elbow under the shoulder. The hips & shoulders should face forward with the neck in line with the spine. Keeping the legs together, lift the hips off the ground until the body is straight & balanced. Either hold the raised position for the prescribed period of time or return the hips to the floor after each repetition.

Cautions: Do not round the spine or allow the shoulder blades to wing or lift off the ribs.

Alternate Jack knife 10334

Tips:

Cautions:

Ankle taps 10217

Tips:

Cautions:

Back extension 04803

Tips: Keeping the neck relaxed, & the legs on the floor, raise the upper body off the floor then return to the start position. Either keep the torso off the floor for every repetition or return to the floor each time.

Cautions: Do not bounce at the top of the movement or extend the upper body too far. If you have a history of spinal injury or other spinal pathologies, seek professional advice prior to commencing this exercise.

Back extension arm-leg raise 01147

Tips: Keep the arms & legs straight with the torso rigid then rock the body from hand to foot. To increase the resistance in the arms & legs, hold dumbbells or place a medicine ball between the feet.

Cautions: The neck should remain in line with the spine & do not excessively extend the low back.

Back flexion gluteal stretch 02750

Progression: Active back flexion exercise from lying position.

Tips: Keep the head & shoulders on the ground & pull the knees towards the chest. The amount that the pelvis lifts off the floor can vary depending on the purpose of the stretch. Do not rock forward & back for the purpose of this stretch.

Cautions: If you have a history of spinal injury or other spinal pathologies, seek professional advice prior to commencing this stretch.

Back flexion stretch 02649

Tips: Start in a kneeling position with the hands under the shoulders, the knees under the hips & neutral curves in the spine. Breathe in & flex the entire spine then breathe out & bring the spine back to a neutral position.

Cautions: Discontinue the stretch if pain or discomfort is experienced in the spine.

Bear Walk 10006

Tips:

Cautions:

Bench dips 03676

Tips: Ensure that the bench is on a non-slip surface & start with the hands approximately shoulder width apart. Flex the elbows to lower the hips towards the ground then extend back to the start position. Keep the hips close to the bench & do not allow the elbows to hyper extend as the arms straighten.

Cautions: If you have a history of shoulder injury or other shoulder pathologies, seek professional advice prior to commencing this exercise. Ensure that the hands have a firm & stable grip on the bench.

Bent Knee Calf Raise 10184

Progression: Single leg bent knee calf raise

Tips:

Cautions:

Box Calf Raises 10029

Progression: Calf raise from an elevation (i.e step) fast up - slow down.

Tips:

Cautions:

Burpees 01391

Tips: Perform a burpee then jump high & reach into the air. Maintain a rigid torso while in the push up position & keep the neck in line with the spine. To modify the exercise, vary the position of the hands on the floor. To increase the resistance, hold dumbbells in the hands.

Cautions: Do not allow the torso to sag or the elbows to hyperextend.

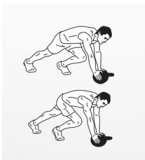

Calf raise walk 02087

heel to toe walk

Tips: Walk forwards in a very slow fashion with a natural heel to toe foot strike & press up onto the balls of the feet at the end of the stride. The feet should continue to face forward & maintain a natural stride length.

Cautions: If you have a history of ankle or foot injury, seek professional advice prior to commencing this

Calf stretch 02691  Progression: split stance calf raise - bend the back knee and go into a calf raise from the front leg. Tips: Step back & place the foot flat on the ground with the foot facing forward. Lean forward at the ankle & allow the heel to lift off the ground. Contract the quadriceps of the rear leg to help keep the leg straight. Cautions: Do not flex the spine or twist at the hips.	Climbers 10278  Tips: Cautions:
Concentric split squat calf raise 06286  Tips: Position the body under the barbell with one foot forward & the other foot on a box. Place the hands comfortably on the bar & hold the chest up, looking forward or slightly upward. Keeping the front foot flat on the floor, extend the knee & hip to straighten the lead leg & then press further onto the balls of the foot. The focus of this exercise is on commencing the ascending (concentric) phase of the split squat from a stationary position. Therefore, this exercise can be undertaken with the assistance from spotters who can assist in lowering the bar to the start position. Alternatively, a Smith machine can be used so at the completion of the split squat the bar can be racked. Cautions: Maintain neutral curves in the spine throughout all phases of the split squat. Do not allow the shoulders to round or the torso to sway forward.	Copenhagen Adductors 10193  couch / step / bench Progression: static hold but shift hips up and down Tips: Cautions:
core balance squat 10414  Tips: Cautions:	DB alternating prone row 04651  Tips: Start with the hands under the shoulders with the body straight. Keep the body in the push up position & pull the dumbbell off the ground in a pushing fashion. Repeat the movements with both arms in an alternating fashion. The speed of the movements & the amount of rotation can vary depending on the requirements of the exercise. Cautions: Ensure that the dumbbells are stable on the ground. Maintain a rigid torso & a neutral wrist position.

DB prone row 04659

Progression: Prone row, holding 2L bottle

Tips: Start with the hands under the shoulders & the body straight. Keep the body in the push up position, the neck in line with the spine & pull the dumbbell off the ground. The range of movement can vary depending on the requirements of the exercise.

Cautions: Ensure that the supporting arm is straight. Maintain a rigid torso & a neutral wrist position.

Dead Bug 10015

Tips:

Cautions:

Deep squat 01211

Progression : Bodyweight squat with 5kg water bottle / backpack, pause at bottom of squat.

Tips: Start with the elbows wide, the feet slightly wider than shoulder width & facing out. Perform a deep squat while maintaining an erect torso & keeping the feet flat on the ground. The knees should track in line with the centre of the feet. The range of motion for the squat may vary depending on strength & flexibility.

Cautions: Maintain neutral curves in the spine & do not pull the neck forward as the hands remain positioned behind the head.

Deep squat 01212

Tips: Start with the hands forward, the feet slightly wider than shoulder width apart. Perform a deep squat while maintaining an erect torso & keeping the feet flat on the ground. The knees should track in line with the centre of the feet. The range of motion for the squat may vary depending on strength & flexibility. To increase the resistance for the deep squat, hold a weight or medicine ball in front.

Cautions: Maintain neutral curves in the spine & do not allow the knees to buckle in.

Figure 4 balance Stand 10030

Progression : Balance on one leg, non-balancing leg moves multidirectional (forward, side to side, backward)

Tips:

Cautions:

Forward lunge backward lunge 05188

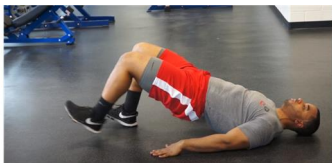

Progression: Continuous forward and backward lunge - no break between

Tips: Lunge forward & backwards continuously, keeping the shoulders above the hips. Maintain a rigid torso during the lunges. The depth of the lunges can vary depending on the requirements of the exercise. The knees should track in line with the centre of the feet & push firmly after each lunge.

Cautions: Do not allow the front knee to travel past the vertical position of the toes unless specified otherwise by an exercise professional.

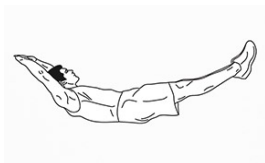

Hamstring walkout exercise 10252

Tips:

Cautions:

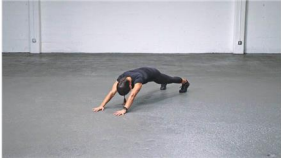

Hollow Hold 10281

Progression: static hollow hold.

Tips:

Cautions:

Jumping Lunges 10307  Tips: Cautions:	Kneeling arm-leg raise 04974  Tips: Start with the hands under the shoulders, the knees under the hips & neutral curves in the spine. Extend the hip & knee & flex the opposite shoulder then return to the start position. Either continue with the same arm & leg or repeat the movements with both limbs in an alternating fashion. Hold a dumbbell to progress the exercise. Cautions: Do not allow the spine to round or sag.
lateral lunges 10447  Tips: Cautions:	Lateral Raise Hold 10428  Tips: Cautions:
Leg raise reverse sit up 06172  Progression : Full range - straight leg reverse sit up Tips: Start with a firm grip on the bar with the legs slightly off the ground. Keeping the legs straight, flex the hips & then the torso to take the feet towards the pole, & then control the movements back to the start position. To increase the resistance through the torso, keep the hips off the ground for every repetition. To progress the exercise, hold the pole with one hand. Cautions: Ensure that the pole is stable & maintain a firm grip. Do not roll back onto the neck. If you have a history of neck or spinal injury, seek professional advice prior to commencing this exercise.	Long lever plank 10489  Progression : Start in a plank position with your hands in front of your shoulders to lengthen the lever. Keep your body in a Tips: Cautions:
Long lever side plank 10490  Progression: Side plank from your hand instead of elbow Tips: Cautions:	Plank Walk Up 10016  Tips: Cautions:

Prone arm-leg raise 04799

Tips: Keeping the neck relaxed, raise one arm & the opposite leg off the floor. Repeat the movements with both limbs in an alternating fashion. Keep the arms & legs off the floor for every repetition or return them to the floor each time. Try to keep the arms & legs straight & turn the hand so the thumbs face the roof to assist the raising the arms.

Cautions: Do not bounce at the top of the movement or extend the hips or arms too high.

Push Up - Uneven 10340

Tips:
Cautions:

Push up 04773

Tips: Start with the body straight & the hands approximately shoulder width apart or slightly wider. Lower the chest towards the floor, keeping the neck in line with the spine then push up to the start position.

Cautions: Maintain neutral spinal curves & warm up the wrists before commencing the push ups. Do not allow the elbows to hyperextend at the completion of the push up.

Reverse sit up 03421

Tips: Keep the head & shoulders on the ground & start with the hips & knees flexed to 90 degrees. Maintain the same angle in the knees & posteriorly tilt the pelvis to raise the knees straight up. Apply gently counter pressure with the hands on the ground to assist with the exercise. The total range of movement is not significant.

Cautions: Keep the head on the ground & the neck relaxed.

Run 02106

Tips: Run forward at a 10km pace for the prescribed time or distance while maintaining correct running technique. Maintain an upright posture with the chest up & swing the arms straight through. The lower limb mechanics such as the height of the knee lift & the foot strike may vary depending on the purpose of the run.

Cautions: Warm up adequately prior to increasing the speed of the run.

SB bridging 04177

Tips: Position the feet securely on the stability ball with the hands on the floor. Lift the hips off the floor until the legs are in line with the torso then reverse the movement back to the start position. Vary the position of the hands on the floor to assist with balance & place the hands across the chest to progress the exercise.

Cautions: Do not raise the body too high off the floor. If you have a history of neck or upper thoracic injury, seek professional advice prior to commencing this exercise.

Side Plank Crunch 10272

Tips:
Cautions:

Side plank with suspended top-leg hip flexion 10491

Progression : side plank - hold knee in flexed position

Tips:
Cautions:

Single Leg Glute Bridge - March 10053

Tips:
Cautions:

Single Leg RDL 10001

Tips:
Cautions:

Sit up 04920

Progression: Sit up with midway pause.

Tips: Flex the torso & slide the hands up the thighs until the fingers are at the knee caps. Reverse the movement back to the start position.

Cautions: Keep the neck relaxed & do not jerk the movements.

Sit up 04921

Tips: Flex the torso to lift the shoulders & upper back off the ground, & then reverse the movement back to the start position. The hands provide support for the head & should not pull the head forward.

Cautions: Keep the neck relaxed & do not jerk the movements.

Split squat 04260

Tips: Assume a split stance with the hips & shoulders square & facing forward. Keep the knees in line with the respective feet & hips. Start with the barbell on the shoulders & lower the hips towards the ground then extend to the start position. The shoulders should remain above the hips & neutral spinal curves maintained.

Cautions: Do not allow the front knee to travel past the vertical position of the toes unless specified otherwise by an exercise professional.

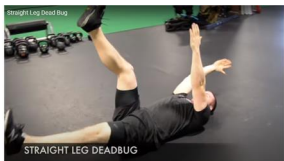

Step up 05988

Tips: The height of the step may vary depending on the requirements of the exercise. However a general guideline in relation to the height of the box is that the knee should be in line with or slightly below the height of the hip. Place the foot on the box in a heel to toe stride & then extend the hip & knee while maintaining a tall posture. The foot should face forward & be in line with the knee & hip. The knee should track in line with the centre of the foot. Reverse the movements back to the start position while maintaining alignment. Either repeat the movements with the same leg or alternate legs with each repetition.

Cautions: Do not round the spine or allow the knee to buckle in. Start with a smaller box & increase the height of the box as strength improves as long as correct technique is not compromised.

Straight leg deadbug 10343

Progression: Straight arm and straight leg deadbug

Tips:

Cautions:
