29/01		05/02		

Single leg 90 degree hurdle jump

COOL DOWN - SELF SELECTED STRETCHES / FOAM ROLLING

Ankling 01285

heel to toe

Tips: Start with an erect posture with the shoulders back. Keep the chin parallel to the ground & the chest out. Run forward by pressing off the balls of the feet. Try to minimize the contact time with the ground for each stride. For the purpose of this exercise, do not allow the heels to contact the ground.

Cautions: Do not round the shoulders or flex the spine. Warm up adequately before commencing this exercise at a higher intensity.

Arm swings 02877

Tips: Start with the legs approximately shoulder width apart & slightly flexed. Extend the arms horizontally then bring them all the way across the body in a self hugging fashion. Begin with smaller movements at a slow speed then gradually increase the range & speed as required.

Cautions: Ensure that the knees remain slightly flexed. Do not force the arms too far back. Keep the arms & shoulders relaxed during the movements.

Arm swings 02880

Tips: Start with the legs approximately shoulder width apart & slightly flexed. Flex both arms in an alternating fashion & allow the elbows to flex at the end of the movement. Try to keep the arms close to the head & repeat the movements. Begin with smaller movements at a slow speed then gradually increase the range & speed as required.

Cautions: Do not force the arms too far back. Keep the arms & shoulders relaxed during the movements.

A-skip 01268

X HOP (Alternate Legs)

X HOP (Alternate Legs) * With MB

Tips: Skip forward & flex the hip approximately 90 degrees. Dorsi flex the same foot during the recovery. Swing the arms straight through to avoid undesired rotation. Maintain a tall & rigid torso with a slight forward lean. The height of the skips & the contact time with the ground can vary depending on the requirements of the exercise.

Cautions: Gradually increase the speed & range of movement if this exercise is used as part of a warm up.

Broad jump 05322

Broad jump into SL Landing

Tips: Begin in the landing position with the shoulders over the knees & the knees over the ankles. Swing the arms forward & jump as far forward as possible. Land on the entire foot & allow the ankles, knees & hips to flex to absorb the landing.

Cautions: Ensure that the surface is non slip & that you have adequate footwear.

Burpees 01391

Tips: Perform a burpee then jump high & reach into the air. Maintain a rigid torso while in the push up position & keep the neck in line with the spine. To modify the exercise, vary the position of the hands on the floor. To increase the resistance, hold dumbbells in the hands.

Cautions: Do not allow the torso to sag or the elbows to hyperextend.

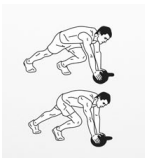

Butt kicks 01294

Tips: Start with an erect posture with the shoulders back. Keep the chin parallel to the ground & the chest out. Flick the feet straight up to contact the buttocks & continue to move forward. Maintain a rigid torso with a slightly forward lean at the hips.

Cautions: Do not round the shoulders or flex the spine. Warm up adequately before commencing this exercise at a higher intensity.

Climbers 10278

climbers (slow)

Tips:

Cautions:

Dead Bug 10015

5 kg weight plate

Tips:

Cautions:

Deep squat 01211

Tips: Start with the elbows wide, the feet slightly wider than shoulder width & facing out. Perform a deep squat while maintaining an erect torso & keeping the feet flat on the ground. The knees should track in line with the centre of the feet. The range of motion for the squat may vary depending on strength & flexibility.

Cautions: Maintain neutral curves in the spine & do not pull the neck forward as the hands remain positioned behind the head.

Glute Bridge with Mini Band 10163

Double leg banded glute bridge

Single leg banded glute bridge

Tips:

Cautions:

Jump rope 00893

Choose Between Jump Rope / Star Jumps / Knee lifts or alternate between for 5 min.

Tips: Keep the shoulders above the hips & continue to look forward during the skips. Keep on the balls of the feet & not the heels. Increase the speed of the skips & decrease the contact time with the ground to progress the exercise.

Cautions: Gradually increase the speed of the

Knee lifts 01443

Tips: Start with an erect posture with the shoulders back. Keep the chin parallel to the ground & the chest out. Run forward & bring the heel over the opposite knee & dorsi flex the foot. The ball of the foot should land on the ground first directly beneath the hip. Drive the foot down into the ground then flex the hip straight up.

Cautions: Do not round the shoulders or flex the spine. Warm up adequately before commencing this exercise at a higher intensity.

Kneeling arm-leg raise 04974

Tips: Start with the hands under the shoulders, the knees under the hips & neutral curves in the spine. Extend the hip & knee & flex the opposite shoulder then return to the start position. Either continue with the same arm & leg or repeat the movements with both limbs in an alternating fashion. Hold a dumbbell to progress the exercise.

Cautions: Do not allow the spine to round or sag.

Lateral bound 01420

Lateral bound with MB hold

Tips: Push firmly off the balls of the feet, minimizing the contact time with the ground. The distance of the jumps may vary depending on the requirements of the exercise. Keep the shoulders inside the vertical position of the lead knee. Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground.

Cautions: If you have a history of ankle or knee injury, seek professional advice prior to commencing this exercise. Adequately warm up before commencing explosive exercises. The landing surface should possess adequate shock absorbing qualities. Consider surfaces such as a spring loaded floors or a hard rubber mat.

Lateral jumps 01309

Lateral jump hold (No obstacle)

SL Lateral jump into hold

Tips: Begin with a counter movement & use the arms to assist with the jumps. The contact time with the ground should be minimal. Try to keep the hips & shoulders square & facing forward with the chest & chin up. Either increase the height of the cone or increase the width of the jump to progress the exercise.

Cautions: Maintain a rigid torso & do not allow the torso to flex or collapse during the transition between jumps. Adequately warm up before commencing plyometric exercises. Do not allow the knees to buckle inward during the contact phase of the jumps. The landing surface should possess adequate shock absorbing qualities. Consider surfaces such as grass or a hard rubber mat.

Lateral lunge 01200

Tips: Maintain an upright torso & keep the hips & shoulders square during the lunges. The lead knee should track in line with the centre of the foot & keep the torso inside the vertical position of the lead knee. The length & depth of the lunge may vary depending on strength & flexibility levels. Hold a medicine ball or weight in front to increase the demand on the hip & torso muscles.

Cautions: Do not allow the lead knee to twist while in a deep lunge position.

Leg swings 01189

Tips: Hold onto an object for additional balance & start with the hips & shoulders facing forward. Maintain an upright posture & keep the leg relaxed during the swings. Gradually increasing the range of motion. Try to swing the leg straight through unless specified otherwise by an exercise professional.

Cautions: Warm up prior to commencing this exercise. Gradually increase the range of motion & the speed of the swings.

Leg swings 01191

Tips: Hold onto an object for additional balance & start with the hips & shoulders facing forward. Maintain an upright posture & keep the leg straight & relaxed during the swings.

Cautions: Warm up prior to commencing this exercise. Gradually increase the range of motion & the speed of the swings.

Micro hurdles knee lifts 01415

Double leg 90 degree hurdle jump

Single leg 90 degree hurdle jump

Tips: Keep the chest up with the torso in a tall position with a slight forward lean at the hips. Lift the left leg over the hurdle then lift the right leg over the next hurdles. Repeat the movements in both directions. Push off the balls of the feet & dorsiflex the feet as soon as they leave the ground. Minimize the contact time with the ground. Focus on fast leg movements rather than moving too fast through the hurdles. Consider incorporating more hurdles to further emphasize a high knee lift. Do not lean the body back while running through. The spacing of the hurdles may be determined by leg length & the speed at which the exercise is being completed.

Cautions: Warm up adequately before commencing this exercise.

Mini trampoline knee lifts 05670

SL Trampoline hops

Tips: Jog on the mini trampoline for the prescribed duration. Continue to swing the arms while jogging to maintain balance. It is at your own discretion whether you jog on the mini trampoline with or without shoes.

Cautions: Ensure that the mini trampoline is on an even & stable surface.

Mini trampoline knee lifts 05671

Tips: Run with fast leg movements & high knees for the prescribed duration. It is at your own discretion whether you jog on the mini trampoline with or without shoes.

Cautions: Ensure that the mini trampoline is on an even & stable surface.

Plank arm leg raise 04426

Plank alternating leg raise

Tips: Start with the forearms flat on the ground & the elbows under the shoulders. Lift the knees off the floor, maintaining neutral curves in the spine & keeping the shoulder blades flat on the ribs. Take one arm off the floor & flex the shoulder while keeping the shoulders square. Either hold the raised position for the prescribed period of time or return the arm to the floor after each repetition. Keep the neck in line with the spine & try not to rotate the torso for this exercise.

Cautions: Do not allow the lower back to sag or the shoulder blades to wing or lift off the ribs.

Plank Pull Through 10155

Cone pull through

Tips:

Cautions:

Pogo jumps 05313

Co-contraction (socks on mat)

Single leg co-contractions (socks on the mat)

Tips: Try to keep the legs straight & jump off the balls of the feet. Minimize the contact time with the ground & maintain an erect posture.

Cautions: Do not land on the heels.

Single leg broad jump into double leg landing 10293

Tips:

Cautions:

Squat jumps 01279

SL Vertical Jump into Double Leg Hold

Vertical jump into SL Landing

Tips: Start with the hips approximately shoulder width apart or slightly wider with the feet facing forward. Jump straight up & absorb the landing to approximately a half squat position then continue jumping for the prescribed repetitions. Land on the balls of the feet first & maintain a rigid torso.

Cautions: Do not allow the torso to flex or the knees to buckle inwards. Do not allow the heels to contact the ground before the balls of the feet.

Star jumps 01302

Tips: The height of the jumps & width of the landing can vary depending on the requirements of the exercise. To increase the resistance of the exercise, hold dumbbells in each hand.

Cautions: Maintain a rigid torso & do not allow the torso to flex or collapse during contact with the ground. Adequately warm up before commencing plyometric exercises. The landing surface should possess adequate shock absorbing qualities. Consider surfaces such as grass or a hard rubber mat.

Step up 05988

Imbalanced step ups hold (2 sec count)

Imbalanced lunge step ups

Tips: The height of the step may vary depending on the requirements of the exercise. However a general guideline in relation to the height of the box is that the knee should be in line with or slightly below the height of the hip. Place the foot on the box in a heel to toe stride & then extend the hip & knee while maintaining a tall posture. The foot should face forward & be in line with the knee & hip. The knee should track in line with the centre of the foot. Reverse the movements back to the start position while maintaining alignment. Either repeat the movements with the same leg or alternate legs with each repetition.

Cautions: Do not round the spine or allow the knee to buckle in. Start with a smaller box & increase the height of the box as strength improves as long as correct technique is not compromised.

Tuck jumps 01301

Repeated tuck jumps

SL Repeated Tuck jump

Tips: Explosively jump straight up & tuck the knees towards the chest. Keep the legs together & there should be minimal contact time with the ground. Rapidly swing the arms to assist with the jumps & push off the balls of the feet, not the heels.

Cautions: Maintain a rigid torso & do not allow the torso to flex or collapse during the transition between jumps. Do not allow the knees to collapse inward during the landing phase of the jumps. Adequately warm up before commencing plyometric exercises.

Walking Lunges 10313

walking imbalanced lunges

Tips:

Cautions:

Wall half squat stabilization 03016

Tips: Keep the head & shoulders against the wall with the feet approximately shoulder width apart. Flex the hips & knees until the thighs are parallel to the ground then extend to the start position. Keep the hands pressed against the wall with the arms straight during the squat. The time spent at the bottom of the squat may vary depending on the requirements of the exercise.

Cautions: The knees should track in line with the centre of the feet. Do not allow the knees to travel past the vertical position of the toes unless specified otherwise by an exercise professional.

Wall squat leg extension 03017

Eccentric only (Leg Extension)

Tips: Keep the head & shoulders against the wall with the feet approximately shoulder width apart. Flex the hips & knees until the thighs are parallel to the ground, take one leg off the ground then extend that knee. Either continue flexing & extending the knee or return to the start position. During the squat, keep the hands pressed against the wall with the arms straight.

Cautions: The knees should track in line with the centre of the feet. Do not allow the knees to travel past the vertical position of the toes unless specified otherwise by an exercise professional.
